

2006 Ford E350 extended camper van - comes with an upgraded 10 cylinder engine for mountain terrain and to haul large loads (like your boat or burner trailer). The engine is a beast—it's a V10 and can get up any hill and through any situation you can throw at it; it's also in great shape with 130k miles on it. I made extensive upgrades to convert this van from your basic cargo van into a solid off grid camper.

The van comes with:

- 2 - 110v solar panels that are easily removed and then re-installed
- 2 AGM deep cycle marine batteries (for extended camping and off grid activities)
- An Eco-Temp propane hot water shower, shower blind for said shower (door mounted and easy set up and storage for transport)
- 5 gallon propane tank
- Water pump
- 30 gallon water tank
- A good size sink
- Full size (newish) comfy mattress – bought new for a cross country trip last summer (only camped a couple of weekends since)
- 12v mini fridge,
- 4 bike bicycle removable rear mounted rack,
- Extra large roof cargo bin
- Roof rack for tying solar panels down or for a roof deck (which I had up then removed after our road trip)
- 3000 watt power inverter and extension cords (we used a projector set up to watch movies against the side of the van when we camp)
- 3 speed dual directional roof fan to help keep the van cool
- Tons of storage space
- New rear tires, very newish front tires

Perfect Burner Van.

Designed and set up to hit the road camping on
a moment's notice.

All the electrical was done by an expert boat electrician and is designed to be able to switch between car battery and the reserve batteries, or switch to the solar charge so you never have to worry about needing a jump.

Nearly black out window covers help keep the light out and people from looking in. The van is fully insulated to keep you warm during cold nights (like the unexpected snowy weekend we spent in Yellowstone). Some rust on a few spots and wheel wells from all the fun places we have been. We've been across the country camping and can vouch for its comfort and fun factor. I made this van be as inconspicuous as possible, from the outside it looks like a normal work van, but once the doors swing open, it's a lovely living space. It saddens me to have to sell it, but although I can think of plenty of adventures to take it on, I no longer have the time.

Location of vehicle: Palo Alto
Price:\$13,000
